

Practical 3: R function using C code

Virgilio Gómez-Rubio

Introduction

In this practical you will learn:

- How to include short functions in C to be called from R

C implementation of the function

1. Write a short C program to implement the inner product.
2. Add the C code to the `src` directory.
3. Create another function to call the C code to compute the
4. Check the package again to fix errors and missing stuff.
5. Install the package and check the function.
6. (Optional) Use Travis CI to check the package.
